Panasonic HVX200, HPX170, DVX100B Controllers

PZFI Zoom/Focus/Iris Control for Panasonic HVX200, DVX100B, and HPX170.

## VZ RockPZFI

Specifically designed for Panasonic HVX200, DVX100B, HMC150, and HPX170 cameras, this is the first and only zoom, focus, and iris control. This powerful combination offers precise control over these three camera functions. Operator may switch between auto and manual control for focus and iris at anytime. Works on all camera supports, stabilizers, tripods, & jibs.

tripod

## Description

The RockZFI utilizes a pressure-sensitive, side-to-side rocker switch like broadcast zoom controls. This rocker has a greater range of motion for a finer degree of zoom control than the throttle style zoom controls. Adjust iris or focus using smooth and quiet knobs that provide easy operation while you compose your shots. Independent focus/iris knobs allow two people to operate together for critical focus during moving shots or crane moves - imagine the possibilities! The manual/auto switches lock into position, letting you watch the picture, not your hands.

- Wide-sweep variable rocker for smooth, sustainable zooms
- Low profile record/pause button
- Unique dual knob adjustment
- Position switches for manual/auto modes

VariZoom is the world's largest manufacturer of lens controls with the widest variety of controls offered anywhere. Our controls are used by CNN, CSPAN, National Geographic Society, Nickelodeon and many other professionals.

And as always: Guaranteed best or your money back!
